

List of Problems to be solved in Sketch book

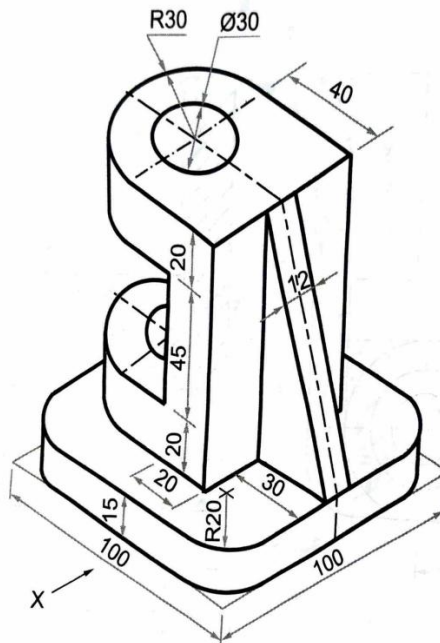

Sheet:-1

CO₁: Visualize and draw orthographic projection and sectional views of any 3D object.

1. Using First angle method of projection draw F.V. in the direction of arrow X, Top View

2. Draw the following views for the given object by using first angle method of projection,
 - Sectional FV along the section plane A-A;
 - Top View and
 - RHSV

Sheet:-2

CO₂: Visualize and draw projection of lines and planes.

1. A line AB 100 mm long is inclined at 30° with HP. Its elevation makes 40° with XY. Draw its projections if its end A is 20 mm above the HP and 15 mm in front of VP. Find its inclination with VP.
2. Top view and front view of line AB measures 55 and 60 mm respectively. Draw its projections if end A is 15 mm above HP and 20 mm in front of VP. Determine its inclination with HP and VP. Point B lies in first quadrant.
3. Draw the projections of a circular lamina of 80 mm diameter resting on HP on one of its circumference point. The lamina is inclined to HP such that the plan is an ellipse of 60 mm minor axis. Find the inclination of plane with HP.
4. A regular hexagonal lamina of side 50 mm is resting in HP on one of its corner. Surface is inclined to HP such that corner opposite to resting corner is 51 mm above HP. Draw the projections.

Sheet:-3

CO₃: Draw projection of regular solids.

1. A square pyramid, 40 mm side of base and 60 mm axis height has one of the sides of base in the HP. The axis of solid is making an angle of 30° to the HP. Draw the projection.
2. Draw the projections of cone if the cone of 60 mm base diameter 70 mm axis length is lying on one of its generators on HP.

Sheet:-4

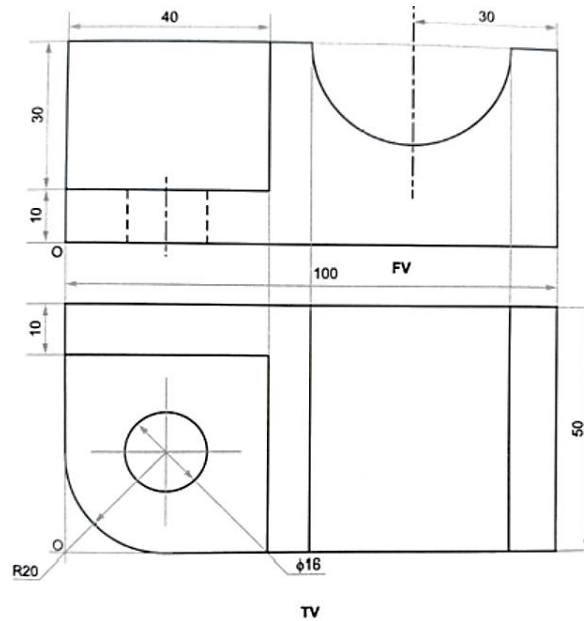

CO₄: Draw sectional views and lateral development of regular solids.

1. A right circular cone of base 50 mm diameter and axis 60 mm long is resting on its base on HP. It is cut by an AIP inclined at 40° to HP bisecting the axis. Draw the front view, sectional top view and also draw the development of lateral surface.
2. A square prism 40 mm side and axis 70 mm long has its base on HP with edges of base equally inclined to VP. A section plane passing through extreme left bottom corner and extreme right top corner cuts the prism. Draw its FV, sectional TV, and the development of lateral surface.

Sheet:-5

CO₅: Visualize and draw isometric drawing.

- Figure shows the front view and side view of an object. Draw isometric drawing about an origin 'O'

- Figure shows the front view and Top view of an object. Draw isometric drawing about an origin 'O'.
